## PARALLEL TILT & SLIDE

### MORE THAN GOOD LOOKS

The Parallel Tilt and Slide door can be operated in three positions: closed, tilt and slide. By turning the handle 90°, the door automatically opens into a secured tilt position at the top making it ideal for ventilation. A further 90° downward twist of the handle and the door swings out at the bottom letting the door slide parallel to the side into a preferred opening position. Even a door or sash that weights up to 440 pounds can easily be operated with one hand. With the multi-lock security concept specific security components protect the locking mechanism against forced entry, lifting and prying the sliding sash open is made extremely difficult.

### Tilt and Slide Features

- Alternative outer frame and sash sizes available
- Glazing beads available to accommodate 3/4" to 1-1/2" IG sizes
- Ideal for both residential and commercial applications
- Available in 2-panel, 3-panel and 4-panel configurations
- 70m front to back multi-chambered profiles

## EUROTECK TILT & TURN

### CLASSICAL DESIGN

High quality gaskets are standard in an attractive gray and comprise a system of dual-compression seals that keep cold, drafts and moisture outside. Galvanized steel reinforcing used according to Westeck fabrication requirements supports the structural integrity and operational reliability. The tilt & turn may be fitted with architectural SDLs for a more traditional "hung" look. A dual action handle allows the window to tilt in for ventilation and swing in for easy cleaning and emergency egress.

Whether you are working toward a sleek contemporary design or are striving to preserve historical accuracy, add interest and drama to your project by utilizing custom architectural shapes. These fixed or operable units can be used alone or mullied to the standard configurations to create a wall of light or simply a focal point.

## FOLD & SLIDE WALL

### BRINGING THE OUTSIDE INSIDE

### European Design, Produced at Westeck Windows

The Westeck Fold and Slide door system offers contemporary style, effective design, excellent reliability, superior operating performance and smooth integration into any architectural style and space. These door systems are engineered using high quality PVC profiles with superior hardware systems that are reliable, secure and weather resistant.

The expertly engineered glide rollers offer smooth and dependable performance. Choose from three to seven operating panels in various configurations and vinyl or aluminum sill. The door systems are available in a range of colors.
