

Bring the Outside in with the

most Transparent Window Screen . . . ever!

The Value is Engineered into the View

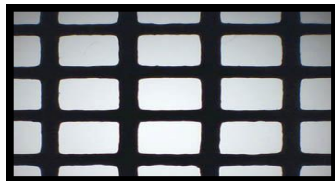

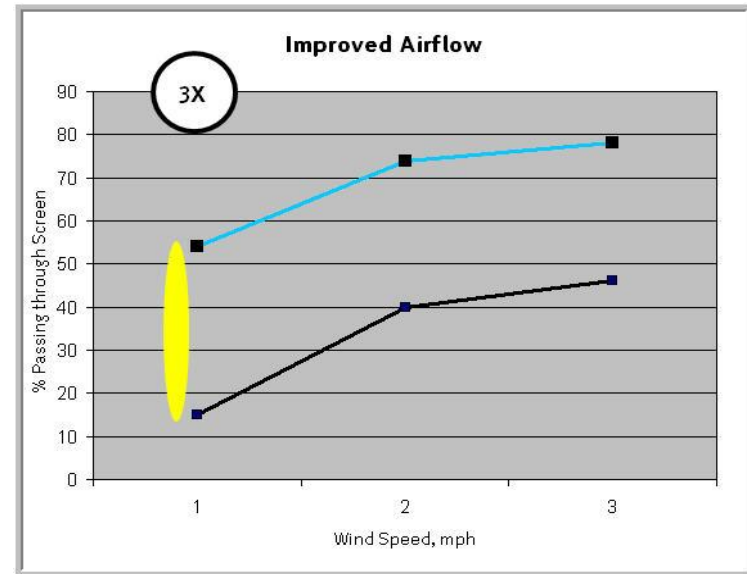

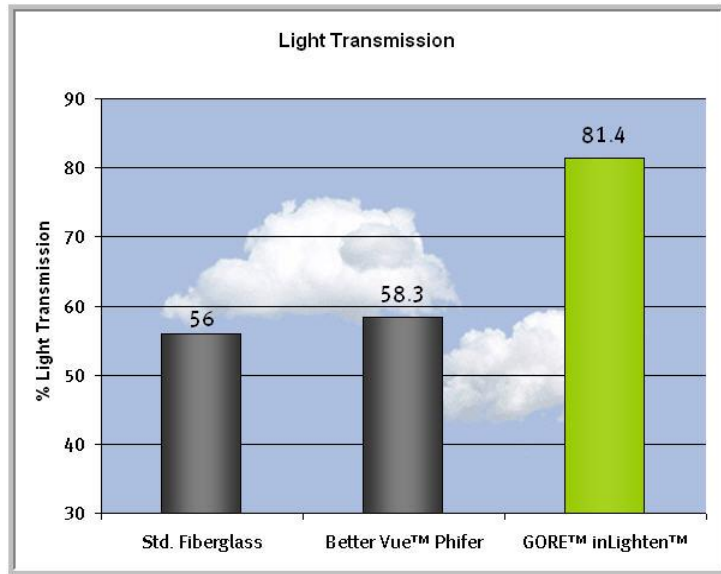

GORE™ inLighten™ screens are made with an innovative ultra fine material which allows it to be virtually invisible when looking out your window. It has the highest levels of light transmission and airflow compared to any available residential window screen material.

The benefits are exceptional. GORE inLighten screens are the ultimate in performance and clarity among all residential window screens. What that means for your customers:

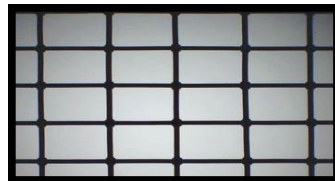

- More natural light & more fresh breeze
- Brings 50% more natural light inside the home
- Allows up to 3X more airflow into the home
- Cools the home faster with more airflow so it improves ventilation
- May result in less energy use for artificial light and air conditioning*
- Same size holes to keep insects out but the fibers are only half the size

The value is in the details of the product . . . See it . . . Feel it!

Conventional window screen

GORE™ inLighten™ window screen
(magnification 5X)

GORE™ inLighten™ screens are made with an ultra-fine fiber that is only 5.5 mils in diameter. Compared to 10 mils for Phifer's BetterVue™ or 11 mils for conventional PVC coated fiberglass.

*Dependent upon climate & temperature
NOTE: All comparisons vs. conventional PVC coated fiberglass window screens

Clearly Better . . . Guaranteed

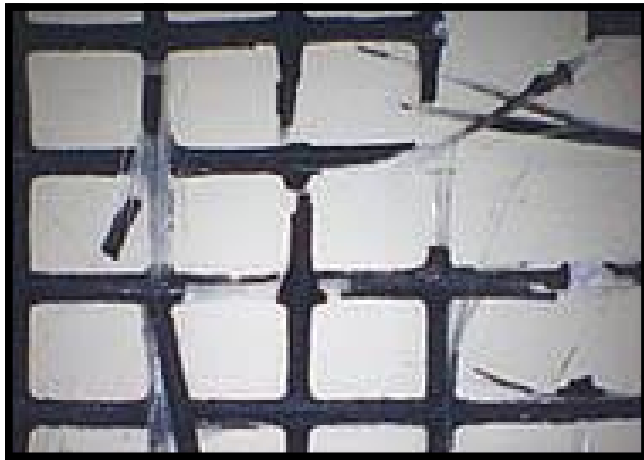

Our screen material is made with a unique fluoropolymer and not PVC-coated fiberglass. Fluoropolymers have never been used in window screens before, and this material gives our product exceptional features. Because of this, GORE inLighten screen material remains unchanged by repeated exposure to sunlight and will not flake, crack, or change color. It is guaranteed with a five-year warranty.

- Maintains strength over time while PVC coated fiberglass degrades with time and UV exposure
- Will not deteriorate after years of exposure to harsh elements in nature, extreme temperatures including salt air and coastal conditions
- Feels different than conventional screens because of the highly elastic polymer and has a “memory” to prevent denting and sagging overtime.
- Cleaning is easy and saves time because of non-stick material
- Made with a patent pending ultra-fine mesh made from fiber that is only 5.5 mils in diameter.
5.5 mils in diameter

Uniquely different—visual clarity, elastic feel, PVC free and unmatched durability.

Sun Safe—GORE™ inLighten™ does not breakdown from UV rays.

Easy Care & Cleaning

Warranty

WARRANTY

Gore warrants that the transparent screen fabric will not flake, crack, change color, or degrade from the sun under normal use conditions for five (5) years following the date of sale by Gore or its authorized representative. The sole remedy for breach of any warranty is limited to replacement of the defective material.
