

Clearly better window screens.™

Because a beautiful window begins with a clear view

Now Available With:

It's time to experience views like never before with GORE inLighten window screens.

Clarity

Conventional window screen (11 mils diameter)

Gore inLighten window screen (5 mils diameter)

Magnification = 5X

- Made with an innovative ultra-fine material, the screen becomes virtually invisible
- Same size hole to keep insects out but the fibers are only half the size

Strength & Durability

Conventional window screen

Gore inLighten window screen

Magnification = 5X

- Screen material remains unchanged by repeated exposure to sunlight and will not flake, crack or change color*
- Fully tested to meet industry standards for window screens
- Maintains strength over time better than fiberglass screens
- Highly elastic polymer feels different than conventional screens and has a "memory" to prevent denting and sagging over time

* UV Exposure Study 2001: 6800 hours (equivalent to 10 years Florida UV exposure)

Best Light Transmission...Best Airflow

Natural Light & Better Airflow

- Brings 50% more light inside the home
- Allows up to three times more airflow into the home
- Test results indicate this screen has the best light transmission and airflow vs. any available residential window screen

Curb Appeal

- Enhance the appearance and curb appeal of any home
- The screens are so clear, you can barely see them
- No need to remove screens during winter because this special screen material will withstand extreme weather conditions

Easy Care & Cleaning

- Made with a special non-stick material, the GORE inLighten screen is easier to clean
- Simply hose off the screen with water and a standard window cleaner. Do not use a brush or scrub.
- No need to remove the screen from the window

See the Difference!

GORE inLighten window screens let you experience more of the natural beauty in and around any home through every window.

The difference is so clear, it's like taking out a window screen and never putting one back in!

About Gore

W. L. Gore & Associates, Inc. has developed an immense reservoir of knowledge about fluoropolymers. In the 50 years since its founding, Gore has become a world leader in applications of fluoropolymers – high performance GORE-TEX® fabrics for outerwear, life-saving medical devices, electronics and industrial pollution control.

Gore combines these research and development efforts with internationally recognized quality systems, world-class manufacturing facilities and strong customer relationships. The result – innovative, high-performing products that are reliably supplied and backed by the highest-quality support and service.
